Secure File Sharing

Worldox and Workshare Integration

When you're collaborating on documents don't compromise your data security

Collaborate securely with 3rd parties

Exchange files from any device

Clean files of metadata & complete accurate reviews

Workshare's integration with Worldox enables you to control files in the document management system (DMS) you know and love, while exchanging files securely during review cycles.

With the Worldox and Workshare integration, you can exchange files and make them mobile, without compromising data security. Files stored in your DMS can be shared on the secure Workshare platform, which will also clean any hidden metadata in the files.

Invited parties can collaborate on documents, making their comments and edits, while you hone the perfect final draft. When that final version is ready, you can simply sync it back to your DMS.

A full activity history of who did what to your document and when will be brought back into the DMS. You can view the audit information in Worldox, so you never miss a thing related to your high stakes documents.

The demand to securely share and review files between colleagues, clients and companies grows exponentially each year. You need to organize documents, protect your data and have an efficient way to exchange files wherever and whenever you need.

Worldox and Workshare provide the smart way to share information and collaborate on files, while ensuring your corporate data is never at risk.

You should use Worldox and Workshare if you want...

Complete file mobility – Access and exchange files from any device, whether in the office or on the move. Then sync back to your DMS with a full activity history against each file.

A secure file sharing solution – Hidden or sensitive data (AKA metadata) is removed from files before they're exchanged, meaning you only share what you intended to share.

It's Worldox, and then some...

Worldox powered by Workshare
Workshare empowers Worldox users with an efficient and secure way to collaborate on high stakes documents outside the DMS.

Workshare®
Change matters

When you're collaborating on documents don't compromise your data security

Deliver mobility

Improve satisfaction and service by ensuring users and clients can exchange and access files securely from the desktop or any mobile device. Files are encrypted and can be securely exchanged between a desktop, tablet, laptop or phone. This enables working when mobile, from home or when travelling.

Engage users

The interface is intuitive and easy to use, while integration with MS Office™ means higher adoption by users. There is also an extended return on investment as the DMS remains the main document repository, eliminating the need for multiple file storage solutions.

Mitigate security risks

Secure your corporate content by ensuring all sensitive data is removed before it is shared externally. A complete audit history is available on shared files, so you can see who has done what with each document, including any activity that goes beyond your firewall.
