Compare Everywhere

Get the lightning-fast, dead accurate way to compare files, everywhere

- Simple to deploy & maintain
- Support on a Mac & in a browser
- On-premise or hosted cloud deployment options
- Comparison embedded in other document platforms

Taking two documents into an application to run a comparison isn't always the most efficient way anymore. Comparisons should happen instantly, accurately and within other applications.

The beauty of Compare Everywhere.

Whether users are in the office or on the move; whether they're accessing documents from the desktop, mobile or tablet; whether in email, an extranet, a data room or a Document Management System; on a Mac or in a browser; tied to their desk or on their mobile, they can get a fast, accurate DeltaView comparison instantly.

Redlines can be generated, with all changes categorized, in seconds, saving valuable time. The new version can also be saved back to the desktop, a document management system or in whichever application the user is working.

Easy to deploy. Easy to manage. And Completely Secure

Installed on-premise or hosted in the Cloud, Compare Everywhere gives users the speed and accuracy of DeltaView comparison on any device, but without the need to deploy to the desktop. This removes the risk of sensitive matter files being transferred to third party cloud infrastructures.

Embedded not just integrated

We've gone beyond traditional integration and are working with leading legal technology providers to embed Compare Everywhere within their user experiences.

It couldn't be easier for developers, IT teams and end users to get the power of DeltaView comparison inside the applications they use each day.

You and Compare Everywhere...

If you're a technology provider or in-house developer and would like to know how to embed Compare Everywhere in your own applications, turn over and find out more!

Compare Everywhere

Get the lightning-fast, dead accurate way to compare files, everywhere

How it works

First select your preferred deployment option by choosing either on-premise or hosted cloud service.

Now choose how you want to embed the experience in your solution.

Embedding Option: JavaScript Library

Workshare has written a JavaScript component, DeltaView.js, that represents the best way to show changes between two documents. It's simple for you to embed the full DeltaView experience consistent with our current desktop application.

Embedding Option: APIs

If you prefer to unlock the power of the comparison engine by building a unique, tailored experience across your platform, then use our extensive REST APIs and create something special for your users.

Commercial Options:

Choose the commercial option that makes sense for your business, either tying to the presence of an existing licensed Workshare user or choosing from multiple commercial OEM options that support white-labeling.

Infrastructure requirements (On-Premise/Cloud)

CPU: 64-bit architecture-based computer with Intel or AMD processor with 4 cores
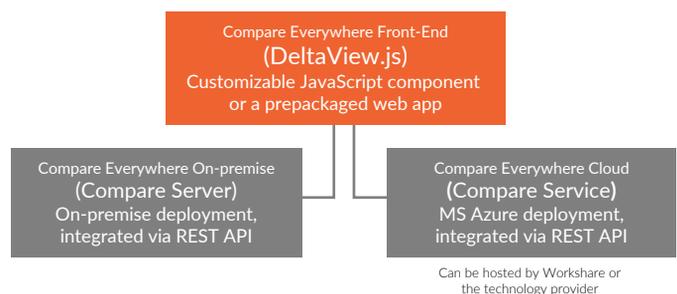

Memory: 4GB RAM

Storage: 1GB free disk space for installation

Supported Operating Systems: Microsoft Windows Server 2008 R2 Standard x64 Edition (with SP1)
Microsoft Windows Server 2012 R2 x64 Edition

REST endpoint proxy: Microsoft Windows Server 2012 R2 x64 Edition

Comparison Types: Compare.doc files, .docx, track change documents, RTF documents, .pdfs, .pptx and plain text files

Compare Everywhere Front-End
(DeltaView.js)
Customizable JavaScript component or a prepackaged web app

Compare Everywhere On-premise
(Compare Server)
On-premise deployment, integrated via REST API

Compare Everywhere Cloud
(Compare Service)
MS Azure deployment, integrated via REST API

Can be hosted by Workshare or the technology provider

About Workshare

Workshare is dedicated to helping professionals compare, protect and share their high stakes documents. Since 1999, Workshare has developed and released intelligent technology for business services firms. Now, more than two million professionals use Workshare around the world.
